about

Founding go-to-market engineer at Vesara, where I work across the website, the funnels and the team's AI agents and automations. I build production systems end to end: a newsletter that writes, checks and sends itself every day, a fleet of evaluated agents on our own server, and an open-source HelloFresh that fills a real grocery cart. Before that I led an AI lab that put voice-enabled 3D agents into a multiplayer VR world. On the side I run content for an influencer ($150k ARR in brand deals, 7M+ monthly views) and explain AI on socials.

things i've built

Finance agent

Jul 2026

A proactive agent that tracks what's owed and due. It reads Gmail, the accountant's Yuki ledger, notes, the calendar and a WhatsApp group, resurfaces missed invoices (four on its first pass), reconciles bills against the ledger and drafts chasers for anything 14+ days overdue. A live, read-only KBC bank feed over PSD2 posts every new transaction to it.

Python · PSD2 · Yuki · WhatsApp

Radars

Aug 2026

An apartment deal radar that pulls four Antwerp rental sources, two through reverse-engineered portal APIs, stores them in Neon and flags listings 10%+ under the 90-day median €/m², with a second opinion from the official Flemish rent estimator. An X radar groups AI posts into topics and has Jev answer five editorial questions on each, surfacing only the best.

Python · Node · Neon · Jev

Vesara agent fleet

Jul 2026

A fleet of Hermes agents for the Vesara team, which I set up on OpenAI models and equip with a shared library of ~190 skills and MCP connectors to our tools. They run on our own VPS: a control plane provisions, backs up and restores each agent, every merge deploys through GitHub Actions, and weekly evals decide promotion (90% to move up a risk tier). A dashboard checks the fleet every 15 minutes.

Hermes · OpenAI · MCP · Docker

os-hellofresh

Oct 2026

An open-source, self-hosted HelloFresh. It plans a week of recipes with vector search and Jev, TypeSafe's classification model, which judges diets, matches plain products and prices what the store can't. It fills a real grocery cart under a hard budget through Instacart's MCP or the Kroger API, at about half a meal kit's cost, and never checks out. A Belgian edition runs on Albert Heijn.

Python · pgvector · Jev · Instacart MCP

Vesara Daily

Sep 2026

A newsletter that writes itself. Agents collect trending repos, skills, fast-growing MCP servers, AI news, papers and funding rounds; pgvector search in Neon drops near-duplicates and one schema-checked model call writes each card. Grounding gates stop a bad issue before Resend sends it with an AI cover and an archive on vesara.ai. A Claude skill drafts the LinkedIn and Substack versions by driving the browser. 1,600+ tests; the engine also runs The Weekly Ledger, a revenue-leakage weekly in testing.

Python · Neon pgvector · Resend · OpenAI

Content Room

Oct 2026

Turns the videos and posts I save on Instagram, TikTok, YouTube and the web into a searchable bank of 1,000+ content ideas. Whisper transcribes, a vision pass reads on-screen text, and a summary round titles each item and files it by theme. It runs on my machine with no API key and syncs to Obsidian every five minutes.

Python · Whisper · ffmpeg · Obsidian

experience

Vesara Inc — Mar 2026 - Present

Founding GTM Engineer

Vesara runs long-horizon agents on a company's data to resurface the revenue it is losing. Advisor from March 2026, founding team since June.

- Co-built the vesara.ai website, frontend and backend (Next.js, Postgres, Resend), including the newsletter signup
- Build custom landing pages for our marketing funnels
- Set up the team's Hermes agents on OpenAI models, with skills and MCP connectors to our tools
- Built an agent that reads the calendar and prepares a brief on everyone in an upcoming meeting

AI agents · Automation · Web · San Francisco Bay Area

Self-employed — Jul 2025 - Present

Head of Content & Partnerships

Run content for a prominent influencer, from scripting to brand deals, and advise other influencers on the side.

- $150k ARR from brand collaborations, 7M+ monthly views and several viral videos

Content · Partnerships · Belgium

Future Tech Labs — Jun 2024 - Jun 2025

Head of AI Research & Operations

Led a lab that deployed embodied 3D AI agents with text-to-speech into a Unity-based multiplayer VR world.

- Created a no-code web launchpad where users build custom AI agents that are deployed into the 3D world
- Launched our own token for blockchain payments on compute, token use and agent generation, reaching a $6.8M all-time high
- Launched our social accounts: 500k+ impressions and 3,613 followers on X, 500+ members on Telegram and 300+ on Discord

AI agents · Generative AI · VR

Le Gala — 2022 - 2024

Logistics

Oversaw logistics for a gala of 4,500 guests: sourced vendors, negotiated contracts and managed the team that coordinated the work.

Events · Grenoble, France

FONCIA — Jun 2023 - Aug 2023

Property Management Assistant

Handled a high volume of client calls and emails, processed rental applications and ran property viewings.

Internship · Grenoble, France

Future Tech Games — May 2022 - Aug 2022

Business Consultant

Market research, competitor analysis and business models, including blockchain options, for The Big Flip, a funded cooperative VR game.

Internship · Poole, UK · Remote

skills

AI agents · Claude Code · MCP · Agent evals · Python · TypeScript · Next.js · Postgres · Docker · GitHub Actions · Web scraping · Financial modelling · French (native) · English (fluent, TOEFL 103) · German (B1)

education

Grenoble École de Management — 2021 - 2024

Bachelor in International Business, Finance major. Erasmus semester at Maastricht University (2023)
